

Environmental Policy

Wall to Wall Radio Communications Ltd is committed to operational excellence in all we do including continuous efforts to improve environmental performance. We are working toward the new ISO 14001:2004 Environmental Standard

We currently adopt and apply the principles of “sustainable development” that is, development which meets the needs of the present, without compromising the abilities of future generations to meet their own needs.

Wherever practicable we will specify products from sustainable sources, products made from recycled materials or designed to be easy to reuse or recycle.

We recognise our responsibility to:

- Minimise waste by following the priority order of reduce, re-use, recycle, compost, incinerate and landfill.
- Implement technologies to use energy resources efficiently.
- Strive to surpass conformance to the law, compliance being the minimum standard by which we rate our performance.
- Use company resources to promote environmental knowledge and awareness to those involved in our business including employees, customers, regulators, suppliers, neighbours and competitors.
- Review and improve the environmental impact of materials used in our products and processes.
- Minimise pollution produced in all parts of the business and aim for “pollution-free” processes.
- Adopt an environmentally sound transport strategy.
- Expect similar environmental standards to our own from all third parties involved with our business – suppliers, vendors, contractors.
- Assist our clients to use our products and services in an environmentally sensitive way.
- Include environmental consideration in investment decisions.
